Geographic Information System (GIS) Operator

Yeats is a National Consulting company providing services in energy and resources, infrastructure, environmental, property and buildings. Formed in 2006, the company's capabilities are rapidly growing and include preliminary planning, environmental assessments and approvals, feasibility analyses, detailed engineering design and major infrastructure works. Environmentally, the majority of our work is within the mining industry; however, there are opportunities to work on infrastructure, development and conservation projects from time to time.

The company has offices in Brisbane, Sydney, Perth, Melbourne, Gold Coast, Mackay, Gladstone and a newly opened office in China. Yeats provides services to both private industry and Local and State Government across Australia.

We have an opportunity for a suitably experienced Geographic Information System (GIS) resource to join our Gold Coast or Brisbane team.

Our continued growth gives excellent opportunities for both career and professional development, working across a variety of projects, and interacting with many disciplines. So if you are interested in joining an experienced team, who are dedicated to providing the best water, environmental and client outcomes in a stimulating working environment, then Yeats is the place for you!

Primary Functions

From a technical perspective we would require the following for this role:

- Proficient with Mapinfo and its related suite of products. Knowledge of ESRI ArcGIS would be advantageous but not a requirement;
- Create high quality maps and reports, processing and storage of new spatial data and creation of metadata;
- Acquire and manipulate environmental data and produce mapping outputs to support Environmental Impact Statements and Flood Studies;
- Have the ability to work independently and identify and implement efficiencies in work processes related to GIS; and
- Have the ability to liaise with internal and external agencies.

Previous Experience

Previous experience with the production of stormwater flood mapping and environmental based work is desirable.

General GIS Support

- Update and streamline existing spatial data to improve drawing time and quality of display. This includes creating cached data, scalable layers, map templates and general geodatabase maintenance activities; and
- Map production, data collection and storage solutions and Mapinfo support.

Personal Competencies

- Ability to work in a team environment;
- Self motivated;
- Project/Client problem-solving focus;
- Ability to develop good business relationships.

A competitive salary package will be offered to the suitable applicant, based on qualifications, skills and experience.

Ideally applicants will have all of the skills and competencies above, but candidates who satisfy most of these requirements are still encouraged to apply. This role is only available to residents of Australia or to those who hold existing valid working visas or permits.

Please email your covering letter and current CV to hr@yeats.com.au.
